#### About Attrasoft:

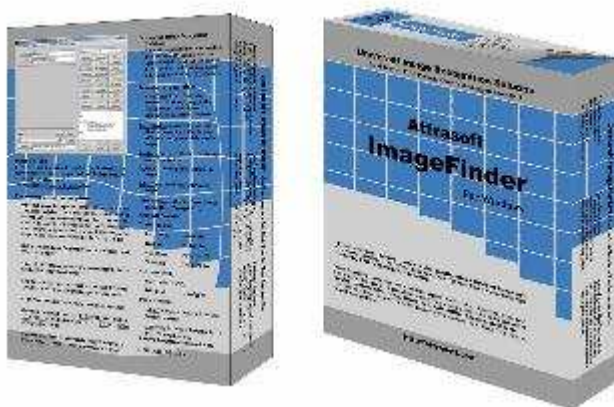

Attrasoft provides **Universal Image/Video Identification, Verification, and Retrieval Technology** and customizes solutions to user-defined requirements with optimized results demonstrating high accuracy, flexibility, and scalability. Image Recognition technology will increasingly replace human labor, increasing productivity, accuracy and profitability while solving previously unsolved complex problems of

- Process Automation
- Quality Control
- Security
- Healthcare
- Biometrics
- ...

#### **Press Release:**

Savannah, GA, **Nov. 1, 2002**, Attrasoft today announced that [The Demo Lab, Global Technology Centre, PricewaterhouseCoopers](#) is using the **ImageFinder** as a demonstration of a potential future technology.

[The Demo Lab](#) is a state-of-the-art interactive demonstration lab where Fortune 100 executives can learn how new technologies can make an impact on their businesses. Featuring the hot new products that

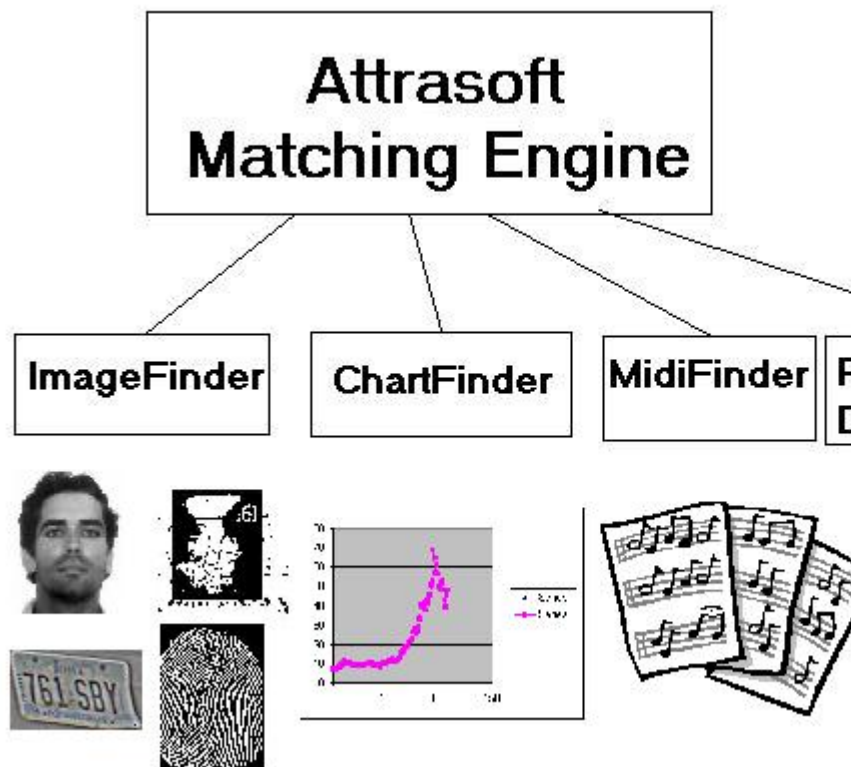

truly make technology "cool," the lab will explore how these new technologies can address business problems and help Fortune 100 executives discover the right solutions.

### Products:

Attrasoft is a small company specializing in image recognition and database pattern recognition. Attrasoft technology has been applied to many fields of pattern recognition. Attrasoft's sustainable unfair competitive advantage is its innovative image and pattern recognition technology (patent pending), which is revolutionary, real-time, extremely accurate, versatile, and was built for large databases.

Attrasoft Matching Engine (AME) technology is software that functions much like the human brain, in that it has the capability to learn, accumulate knowledge, and apply this knowledge to new situations. Through a combination of observations and adaptive pattern matching, Attrasoft Matching Engine (AME) has the capability of identifying objects.

One of the Attrasoft products is the **Attrasoft ImageFinder**. **ImageFinder** will revolutionize image matching (verification or 1:1 matching, identification or 1:N matching, search or retrieval or 1:N matching, and classification or N:N matching)!

Attrasoft's technology CAN DO the following TODAY:

- Has real-time image recognition capability (image-based, not key-word based)
- Can be used for ANY image .. stamp .. trademark .. forensic .. dental .. internet .. satellite .. face .. Infrared .. x-ray .. color photos .. black & white .. video recognition .. Fingerprints .. microscopic ..
- Attrasoft provides accurate image matching libraries for system integrators.

OS: Windows 95/98/ME/2000/XP.
