### **What is *Predictor*?**

*Predictor* is Attrasoft's application of neural network technology.

*Predictor* analyze tremendous amounts of information available through your database or spreadsheets, **learning relationships** and patterns. This enables *Predictor* to detect subtle changes and predict results.

### **What is Neural Network technology?**

**Neural network technology** is software that functions much like the human brain, in that it has the capability to learn, accumulate knowledge, and apply this knowledge to new situations. Through a combination of observations and adaptive pattern matching, neural networks have the capability to learn and draw **conclusions**.

### **How do *Predictor* "learn"?**

*Predictor* learns by **observation**. They must observe enough example behavior to identify the underlying patterns. Through this ongoing, **self-learning process**, *Predictor* can acquire far more knowledge than any expert in the field.

### **What are some potential business use for *Predictor*?**

A spread sheet user or a database user can utilize *Predictor* as the basis for sophisticated business/medical information analysis, such as **predicting future** demand for products, enabling businesses to produce just the right amount at the right time. Please see the examples below. (You can easily image thousands of applications like this).

---

Making decisions based on your projection of the future events is a way of life. *Attrasoft Predictor is a **fast terabyte data processing tool for your database***. It uses a sequence of numbers to predict the next row of numbers in line. It uses historical data to predict future possibilities. It does not matter what you want to predict.

90% of the work in using the **Predictor** is to prepare your database containing your historical data. (Many corporations

already have their database in place that contains years of historical data. It is often overwhelming because of the sheer volume to mine the data for the purpose of strategic thinking.) The remaining 10% of the work is to operate the **Predictor** (two clicks). The **Predictor** is especially good if you have a terabytes or gigabyte database because of its accuracy and speed.

Once your data is prepared correctly, the **Predictor** is able to provide you with rated predictions on any subject or any problem. Attrasoft **Predictor** can:

- [Predict Stock Market](#)
- [Predict earnings and revenue of a company](#)
- [Predict short term and long term interest rates](#)
- [Predict commodity \(gold, oil, corn,...\) prices](#)
- [Predict regional/worldwide price fluctuations for a particular merchandise item](#)
- [Predict various indicators/indexes of the economy for strategic thinking and policy issues](#)
- [Predict Dynamic Systems](#)
- [Predict Markov Chains](#)
- [Predict other complex systems](#)
- ...

**Q & A**

**Q:** Where can I find Predictor 2.6 shareware?

**A:** Predictor 2.6 does not have shareware. [Predictor 2.4 shareware can be downloaded here.](#)

**Q:** What is the difference between Predictor 2.6 and predictor 2.4?

**A:** Predictor 2.6 has integer prediction options, multi-period prediction capability, weighted average calculation and summary of the prediction results.
